

METHODS OF POSITIONING COMPONENTS USING LIQUID PRIME MOVERS AND RELATED STRUCTURES

- 5 A liquid prime mover can be used to position a component on a substrate. For example, a liquid material can be provided on the substrate adjacent the component such that the component has a first position relative to the substrate. A property of the liquid material can then be changed to move the component from the first position relative to the substrate to a
- 10 second position relative to the substrate. Related structures are also discussed.
